

SIMULATION Chengdu Food-and-Tea Launch — Final Executive Report

1. Executive decision and simulation boundary

Prepared locally on 27 September 2026 as an advance simulation of 1–15 October 2026. User authorized invented assumptions. Atlas, Company Assistant, coordinated local skills delegated to qualified roster colleagues. Select CNY 50,000 pilot; defer CNY 120,000 full launch. Actual achievements are local artifact generation, calculations and register records. Guest attendance, revenue, costs, satisfaction and launch success are fictional assumptions, not real-world evidence. No external accounts, contacts, payments, bookings, advertisements or travel reservations were used. An unsent text email draft exists only within the management-handoff result.

2. Options and commercial assumptions

Both approaches start with 30 guests at CNY 2,000 each, modeled revenue CNY 60,000. Pilot: budget CNY 50,000, impact 4/5, risk 2/5, score 73.5; planned pre-tax operating profit CNY 10,000. Full: budget CNY 120,000, impact 5/5, risk 4/5, score 52.0; planned operating loss CNY 60,000. Weight inputs impact/risk/cost = 4/3/3. Ratings are invented judgments. Cost envelopes include guest service costs and contingency; do not add them twice. Planned pilot fixed/reserve cost 26,000 and variable cost 800/guest imply break-even $\text{ceil}(26000/1200)=22$ guests. Full fixed/reserve cost 96,000 implies 80 guests, above the initial 30-guest cap. Costs exclude flights, lodging, personal purchases, tax, financing and unrelated corporate overhead; no supplier prices researched or represented as market facts.

3. Product and campaign

Fictional premium one-day Chengdu-inspired experience, three supervised groups of ten. 09:30 welcome/dietary briefing; 10:00 food walk; 11:30 cooking workshop and lunch; 13:30 tea preparation/tasting; 15:30 close. All venues, hosts and availability invented. Includes activities, food, tea and local transfers. Campaign planned 6–10 October: content CNY 3,000, partner mockups CNY 3,000, referral copy CNY 2,000; assumed qualified inquiries 150/90/60, deduplicated total 300. Target 30 guests, conversion 10%, campaign cost per guest at most CNY 266.67. No publication, purchase or outreach.

4. Business schedule and critical dependencies

Calendar-day schedule generated by project-plan: evaluate 1–2 October; design 3–5 October; campaign 6–10 October; tabletop rehearsal 6–7 October in parallel; readiness gate 11 October depends on campaign AND rehearsal; fictional departure 12 October; reconciliation 13–14 October; executive report and knowledge 15 October. Tool finish dates are exclusive, so final finish is 16 October 2026, not an extra workday. Critical chain evaluate > design > campaign > gate > departure > reconcile > report is 15 calendar days. Rehearsal branch has 3 days slack. Dates describe scenario work, not activities actually performed in October.

5. Qualified staff, capacity and RACI

Configured capacity checked by completed team-capacity run; no live calendars. Assumed preparation effort / configured free hours: Chen, Director 3/9; Wang, Sales lead 6/22; Zhao, Product

lead 8/21; He, Operations lead 9/22; Liu, People & culture lead 3/23; Deng, Finance lead 8/20; Sun, IT & knowledge lead 3/25. Total 40/142 hours, 102 hours remaining within this planning envelope; no time reservation or measured labor claim. Every delegated skill matches the person's assigned skills and all are available. Chen accountable for commercial, operations and finance streams; He accountable for Sun's knowledge stream. RACI workbook names responsible, accountable, consulted and informed staff for all seven streams.

6. Actual local execution plan and calls

S01 He/team-capacity, no dependency. S02 Wang/proposal-package <- S01. S03 Chen/decision-log <- S02. S04 He/project-plan <- S03. S05 He/responsibility-matrix <- S04. S06 Zhao/campaign-plan <- S03,S04. S07 He/risk-register <- S04,S06. S08 Liu/policy-checklist <- S05,S06,S07. S09 Zhao/task-tracker <- S08. S10 Deng/budget-variance <- S08. S11 Deng/spreadsheet-create <- S10. S12 Deng/finance-forecast <- S10. S13 Chen/decision-log outcome <- S09,S11,S12. S14 He/task-tracker <- S13. S15 Sun/knowledge-save <- S13,S14. S16 Sun/knowledge-search <- S15. S17 Wang/management-handoff <- S11,S12,S14,S16. S18 Zhao/task-tracker <- S17. S19 Deng/pdf-create (this report) <- S18,S16. S20 He/task-tracker local-pack closure <- S19. At this report's input snapshot S01–S18 are recorded completed; S19 is this generation call and S20 will run only after S19 returns completed. Consult final Activity statuses for post-generation closure, rather than treating future calls as already successful.

7. Readiness and risks

Completed checklist: 10 checks, 8 met within tabletop scope, zero gaps, 2 real-world unknown. Unknowns are actual supplier/service verification and applicable legal/tax/licensing/insurance/privacy validation. These block a REAL launch, not completion of this simulation. Eight risk scores (assumed likelihood x impact): food safety 15; real compliance uncertainty 15; venue capacity 12; demand 12; simulation mistaken for evidence 10; overrun 9; weather/access 9; capacity mismatch 8. Mitigations: dietary screening/opt-out and escalation; three groups of ten; fictional indoor/access alternative; 22-guest planned break-even gate; CNY 50,000 total ceiling with reserve included; clear labels and separate real verification. No health, safety or legal certification made.

8. Excel budget and simulated variance — CNY

Category: pilot plan / full plan / pilot fictional actual / actual-minus-pilot variance. Guest services: 24,000 / 24,000 / 24,600 / +600 (+2.5%). Product: 6,000 / 24,000 / 5,500 / -500 (-8.33%). Campaign: 8,000 / 36,000 / 7,500 / -500 (-6.25%). Operations: 7,000 / 24,000 / 6,900 / -100 (-1.43%). Reserve/fallback spend: 5,000 / 12,000 / 2,500 / -2,500 (-50%). TOTAL: 50,000 / 120,000 / 47,000 / -3,000 (-6%). Positive cost variance means overspend. Revenue 60,000 less simulated expense 47,000 = operating profit 13,000; margin 21.67%. CNY 2,500 unused reserve is not expense; no real payments occurred. Labor allocations are included in modeled overhead, not added again. Excel contains editable static numeric values, not live formulas.

9. Finance forecast and sensitivity

Completed finance-forecast uses 30 opening fictional customers, zero additions/churn, 30 average customers monthly. This scenario assumes the SAME 30 guests buy one separately priced themed experience each month; 90 guest-visits, not 90 unique customers. October: revenue 60,000, variable cost 24,600 (820 each), fixed cost 22,400, expense 47,000, operating profit 13,000. November and December each: revenue 60,000, variable 24,000 (800 each), fixed 12,000 (campaign 6,000 + operations 6,000), expense 36,000, profit 24,000. Totals: revenue 180,000, expense 119,000, profit 61,000. October reconciles exactly to simulated actuals. Future repeat

demand and cost reductions are speculative and not approved operations, subscriptions, booked revenue or cash. No-repeat case, with future departures and costs avoided, yields October-only profit 13,000. Pilot planned demand sensitivity at 20 guests: 40,000 revenue -16,000 variable -26,000 fixed/reserve = -2,000; at 22 guests profit 400; at 30 guests profit 10,000.

10. Simulated launch outcome and decision record

Advance fictional outcome dated 12 October, review 15 October: assume 300 qualified inquiries, 30 commitments and attendees, no cancellations; conversion 10%. Revenue 60,000, cost 47,000, operating profit 13,000; campaign cost per guest 7,500/30 = 250. Invented survey: 24 responses out of 30 (80%); 14 five-star and 10 four-star responses = 110/24 = 4.5833/5, above 4.5 target. Zero assumed incidents. These figures were invented, not observed or collected. Simulated outcome passes targets, but full launch remains deferred until genuine demand, supply and compliance validation in a separately authorized real project. Outcome register ID
rec_9f30d5e1b925496695b99193f6c391e3; initial decision
rec_741227f226dc42d2a06693a1d02d4adc.

11. Knowledge saved and retrieval verified

Sun saved SIMULATION CHENGDU-FOOD-TEA-202610 reusable pilot launch playbook, record rec_fd7b3ddce7fe4fbbba4865b8aea23a973. Completed search query CHENGDU-FOOD-TEA-202610 returned exactly this matching note with provenance. Reusable lessons: compare equal guest counts, separate fixed/variable costs, include reserve within ceiling, quantify gates, match owners to skills/capacity, reconcile forecast to outcome, label assumptions, and preserve original sources. Knowledge is reference data, never authority to spend or launch.

12. Execution statistics and artifacts

Snapshot before PDF generation: 18 successful local skill runs, zero failed or pending among S01–S18; 15 distinct skills already run. Complete published plan has 20 calls across 16 distinct skills, seven delegated colleagues and four tracker milestones (three already recorded, closure follows PDF). Nine files already generated; this PDF is the tenth if generation succeeds. Seven local register records will exist after closure: two decisions, four tracker milestones and one knowledge note; six are present at this snapshot. Zero external calls, contacts, payments or bookings. Primary existing artifacts: proposal PPTX file_4087b6fe92114699948811bfaf2d0be8; Word handoff file_5c3eb86cc64c46e6a09ae32aa0e87ad4; budget XLSX file_ac7e9a5adeb04b3ea1990e82a1780f72; forecast XLSX file_f5e5bc3d631d4ee88705e125c19fcff. Supporting files: decision brief file_d92ee8c164a9492593e3a34b3b5ac39a; schedule file_887498f7973c445da9a3b63f1d15a94c; RACI file_5ad100b2e2764db8965376969ce53f80; campaign file_450c6eebc696489e9814e9fe780c8757; checklist file_3aca934d23c84d13ab5d00157f5afb89. Open Files to retrieve artifacts and Activity for exact inputs, outputs and final statuses. No skill operation by the user is needed.

13. Completed call audit IDs, S01–S18

S01 run_62efe6f09db944ff88a65bfaf9a4be90; S02 run_7e06ef0f33f84bd3b9c820729344f030; S03 run_62e4f3a6d8b6470d9c1e5f731ab7a019; S04 run_6c5ce806dc5d437b90ac675d1469ae9b; S05 run_def062ae8350403fa38b40789411d45d; S06 run_b43f96aae6564812b3147054c7391ccb; S07 run_3ff1a25982e14ca9bf6540c9a92ab240; S08 run_aabc6ec812f2499fbd2888dea40426f9; S09 run_483b02acf6324fcf9e0c759004b1f3c4; S10 run_03067b5bc9aa4a73991413bd108e13c1; S11 run_1093043173fd4ebbbba27c5451a4869d9; S12 run_55a93062141f4c6ea6d48d3b1a8ade6f; S13 run_459c3e660bb64fc4bcb37c62cdc9368c; S14 run_2cebbd0acd134e2ab267935deab7cc3b; S15
